

National Institute of Business Management
School of Computing and Engineering
Course work | Assement Announcement Sheet

Course Name	DSE		
Module Name	EAD-1		
Batch	25.1P		
Learning Outcomes Covered (Mention according to the Module Descriptor)	Use core programming concepts for software development.		
	Develop advanced User interfaces.		
	Use of Database operations.		
	Apply design patterns for software developments.		
	Produce advanced reports required for decision making.		
	Generate deployment version of the enterprise application.		
Assesement CW No			
Assesement Mode	Individual Group	Group (if it is group mode only)	
		Group Size	Grouping Criteria
		NA	NA
Assesement Type	Practical Test Report Software Presentation VIVA MCQ		
	If other specify		
Hand in Date Time	2026-05-17		
Hand out Date Time	2026-06-06		
Submission Details (Format and Location)	Git Hub and LMS(Link)		
Plagiarism Criteria	Zero marks will be set for plagiarized work.		

Assement | CW Description

DESCRIPTION :

You are required to identify a software application to be developed with a set of requirements. It is required to select a major scenario for the selected software application to be developed. **The student should receive approval through a single page proposal before 2026-05-24.**

E.g.: Hotel Reservation System (Application Title)

Selected scenario-Room Reservation (major case)

PROPOSAL CONTENTS:

- Introduction
- Requirements (bullet and brief each)
 - Input Requirements (2-5)
 - Process Requirements (2-5)
 - Output Requirements (2-5)
- Conclusion

PROPOSAL FORMAT:

- Headings -14 points Times New Roman
- Contents -12 points Times New Roman

DELIVERABLES:

- User Interfaces
 - Data Input Screens
 - Data Process Screens (Transaction)
 - Data Output Screens
- Dashboard
- Application of EAD core concepts such as OOP, Multithreading, IO streams, Exception Handling.
- Reports
 - A minimum of one major report is used to make a crucial decision using several data tables.
- Data Store

TOOLS:

- DBMS MySQL
- Reporting Jasper
- Editor NETBEANS/Preferred

Marking Rubric					
Criteria	Excellent	Good	Satisfactory	Needs Improvement	Marks
Application Breadth and Depth	Application includes extensive features with complete implementation of all requirements. Demonstrates advanced functionality, integrations, scalability, and innovation.	Most requirements are implemented with good functionality and moderate complexity. Minor features may be missing.	Basic requirements are implemented with limited functionality and minimal complexity.	Application is incomplete, lacks important features, or demonstrates very limited functionality.	20
Quality of User Interfaces	Interfaces are highly professional, visually appealing, user-friendly, responsive, and consistent across the system. Excellent navigation and accessibility.	Interfaces are clear and functional with good consistency and usability. Minor design or navigation issues exist.	Interfaces are usable but basic. Some inconsistencies, poor alignment, or navigation difficulties are noticeable.	Interfaces are poorly designed, difficult to use, inconsistent, or incomplete.	20
Application of Core Concepts	Demonstrates excellent understanding and application of programming principles, OOP concepts, validation, algorithms, security, and coding standards. Code is optimized and well-structured.	Good implementation of core concepts with proper coding practices. Minor issues in structure or logic.	Basic understanding of concepts with partial implementation. Some coding standards or logic are missing.	Poor understanding of programming concepts. Weak structure, logic, or improper implementation.	20
Reports	Report is comprehensive, well-structured, professionally formatted, and includes methodology, diagrams, screenshots,	Report is well-organized with sufficient explanations and formatting. Minor details may be missing.	Report contains basic information but lacks clarity, structure, or sufficient supporting evidence.	Report is incomplete, poorly formatted, or missing important sections.	20

	references, and critical analysis.				
Data Store	Database/data storage is fully functional, normalized, secure, and efficiently manages data with complete CRUD operations.	Data storage is functional with proper structure and most CRUD operations correctly implemented.	Basic data handling is implemented with limited efficiency or incomplete CRUD functionality.	Weak or incomplete database implementation with major issues in data handling.	10
Deployment Success	Application is successfully deployed and fully operational with proper configuration, portability, and minimal errors.	Application is deployed successfully with minor configuration or execution issues.	Application deployment is partially successful but contains noticeable issues.	Deployment unsuccessful or application fails to operate correctly.	10
